-!- FUNCTION: Receptor for TNFSF6/FASL. The adaptor molecule FADD
recruite scapase-8 to the activated receptor. The resulting death-
inducing signaling complex (DISC) performs caspase-8 proteolytic
activation which initiates the subsequent cascade of caspases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (aspartate-specific cysteine proteases) mediating apoptosis. FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T-cells, or

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 5, Application US/09612033B
; Sequence 5, Application US/09612033B
; Patent No. 6627199;
; GENERAL INFORMATION:
    APPLICANT: Saris, Chris
; TITLE OF INVENTION: Isolation, Identification, and Characterization of
; TITLE OF INVENTION: Lemst2, a No. 6627199el Member of the TNF-Receptor Superfamily
; TITLE OF INVENTION: Of Genes
; TITLE OF INVENTION: Of Genes
; FILE REFERENCE: 01017/35434A
; CURRENT FILING DATE: 2000-07-07
; PRIOR APPLICATION NUMBER: US 60/143,063
; PRIOR PELING DATE: 1999-07-09
; NUMBER OF SEQ ID NOS: 15
; SOFTWARE: PatentIn Ver: 2.0
; SEQ ID NO 5
; LENGTH 412
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 CTTTGGCGGCGGCTGCTGCTGCTGCTGCTGCTGCTGCTGAATCTGCCCTTGCAGGTA 120

US/09041886

Patent No. 623872

GENERAL INFORMATION:
APPLICANT: Bradesen, Dale E.
APPLICANT: Rabizadeh, Sharroz

TITLE OF INVENTION: Proapoptotic Peptides, Dependence
TITLE OF INVENTION: Polypeptides and Methods of Use
NUMBER OF SEQUENCES: 72

CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell & Flores LLP
STREET: 4370 La Jolla Village Drive, Suite 700
3: Hamilton, Brook, Smith & Reynolds, P.C.
Two Militia Drive
                                                                                                                                                                                                                                                                                                                                                                                        CURRENT APPLICATION DATA:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                              and their secreted splice variants, belonging to the tumour necrosis factor (TNF) receptor super gene family and polynucleotides encoding such proteins. The composition and methods are useful in diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 and/or abnormal expression of its putative ligand, such as sepsis, cachexia, autoimmune diseases, inflammatory diseases, viral, bacterial and parasitic diseases or cancer. They may also be used for chromosome identification or mapping. The invention is useful in gene therapy. The present sequence is mouse tmst2-receptor splice variant cDNA used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                       CITTGGCGGCGGCTGCTGCTGCTGCTGCTGCTGCTGCTGAATCTGCCCCTTGCAGGTA 120

The invention relates to transmembrane decoy-receptor (tmst2) proteins and their secreted splice variants, belonging to the tumour necrosis factor (TNF) receptor super gene family and polynucleotides encoding such proteins. The composition and methods are useful in diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 and/or abnormal expression of its putative ligand, such as sepsis, acachexia, autoimmune diseases, inflammatory diseases, viral, bacterial and parasitic diseases or cancer. They may also be used for chromosome identification or mapping. The invention is useful in gene therapy. The present sequence is mouse tmst2-receptor CDNA used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a tmst2-receptor polypeptides and the polynuclectide encoding them. The sequences of the invention are useful for treating diseases and conditions including acquired immunodeficiency syndrome (AIDS), ansemia, autoimmune diseases, cachaxia, cancer, cerebral malaria, diabetes mellitus, disseminated intravascular coagulation, hademorrhagic shock, hepatitis, insulin resistance, leprosy, lenksemia, lymphoma, meningitis, multiple sclerosis, ischaemia, obesity, organ rejection, rheumatoid arthritis, septic shock, stroke, adult respiratory distress syndrome (ARDS), tuberculosis and a number of viral diseases. This sequence represents cDNA encoding the murine tmst2-receptor
                                                                                                                                                                       Mouse; tmst2-receptor; gene; ss; acquired immunodeficiency syndrome; AIDS; anaemia; autoimmune disease; cachexia; cancer; cerebral malaria; diabetes mellitus; disseminated intravascular coagulation; haemorrhagic shock; hepatitis; insulin resistance; leprosy; leukaemia; lymphoma; meningitis; multiple sclerosis; ischaemia; obesity; organ rejection; rheumatoid arthritis; septic shock; stroke; adult respiratory distress syndrome; ARDS; tuberculosis; viral disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel tmst2-receptor polypeptide useful for diagnosing and treating disease e.g., autoimmune disease, cachexia, cancer or viral, bacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 1550;

The composition and methods are useful in diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 and/or abnormal expression of its putative ligand, such as sepsis, cachexia, autoimmune diseases, inflammatory diseases, viral, bacterial and parasitic diseases or cancer. They may also be used for chromosome identification or mapping. The invention is useful in gene therapy. The present sequence is a chimeric DNA comprising mouse timst2- receptor DNA and human immunoglobulin Fc region DNA. This sequence is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    312
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CTGCTGCTGCTGCTGCTGCTGCTGCTGCTGAATCTGCCCTTGCAGGTAAAATTTGCTATG 132
